

Features and Benefits

- Thermoplastic design with stainless steel fasteners resists process and atmospheric corrosion.
- Pressure rated up to 150 psi in full flow (open) position, and 75 psi back-pressure in the closed position (non-shock water at 73° F).
- ANSI Socket x Socket, or ANSI Class 150 flanged type.
- Two-piece body design joined with 304 SS fasteners, and an EPDM gasket. This valve can be disassembled for service.
- Gravity-based closure (no spring). EPDM seal weighted with a PVC disc. pressure less than 0.5 psi
- Minimum opening
- Swing check valves are designed for horizontal installation. Check valves must be installed with the Flow-Arrow Indicator pointing in the direction of the flow of the system. The Flow Arrow Indicator must be on the TOP of the valve, so that the hinge will be in the proper position.
- Valve should be installed with the inlet and outlet at the same level.
- It is recommended that these valves be installed no closer than 10 pipe diameters from a pump. At least 5 pipe diameters should be between these valves and an elbow. As with all plastic piping, the maximum fluid velocity is 5 feet per second. This velocity minimizes the effects of valve closure and pump start up or shut down.

For use in irrigation, swimming pool, and commercial plumbing applications to prevent backflow. The open position allows for unobstructed continuous flow with minimal head loss. Swing check valves are designed for horizontal installation. Swing Check is not recommended to be installed with outlet side angled down or facing downward. All check valves must be installed with the flow-arrow pointing in the direction of the flow of the system. The flow velocity should not exc
